# Determining the system-matched supplies tailored for your region for the Datacard® SD160™ card printer
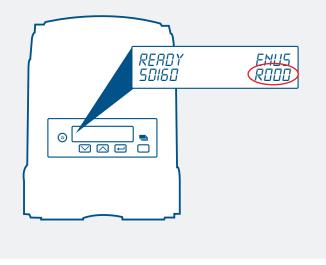

To help ensure you get consistent performance and image quality with every card, use only genuine Datacard® Certified Supplies color panel ribbons that are designed exclusively for your system and customized to your region. When purchasing ribbons from your authorized Datacard partner, include your regionalized part number code to make sure you receive supplies that are matched to your SD160 card printer.

## Determining your SD160 card printer's region code

If you are just getting started, you can find your region code indicated on the printer ID label found on the outside of the printer packaging.

After loading your color ribbon supplies, you can also find your printer's region code on the LCD display screen of the unit (as shown in diagram). You may access this information at any time.

### Purchasing regionalized Datacard® Certified Supplies

When making a purchase, include the region code as a replacement for RXXX in the appropriate ribbon part number you wish to order. For example, if your region code is R000, you would order the color panel ribbon below with the part number 534100-001-R000.

| Item Number | Description | Yield |
|:---:|:---:|:---:|
| 534100-001-RXXX | YMCKT full-color ribbon kit<br>Case of 16 ribbon kits | 250 images<br>4,000 images |
